Vessel flow	$q = -\frac{\pi r^4}{8\mu} P'$
Fixed permeability	$q = -\frac{\pi r^2 K_v}{\mu} P'$
Wall exchange	$j = 2\pi r L_p (P - \overline{p})$
Terminal exchange	$Q_a = G_a (P_a - \overline{p}_a)$
Equal pressures	$P = \overline{p}$
Spread exchange	$j = \beta_\epsilon (P - \overline{p}_\epsilon)$
Line source	$-\nabla \cdot (M \nabla p) + dp = j \delta_\Lambda$
